NEW ABSTRACT

A beverage making device comprising a brewing chamber (5)-for enclosing a pad containing a substance from which the beverage is brewed. The brewing chamber (5)-has an upper wall (4)-with one or more holes through which heated water can enter the brewing chamber-(5). The upper wall (4)-can hinge from a substantially horizontal brewing position in which the upper wall (4)-is a portion of the wall of the brewing chamber (5)-into an open position in which the pad can be removed from the brewing chamber-(5). A substantial portion of the surface of said upper wall (4)-is provided with protrusions (21). The protrusions have a height of more than 0.5 mm, and the distance between every two neighboring protrusions (21) is less than 12 mm.
